ML702 - Advanced Machine Learning

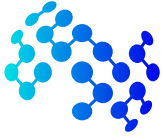

| | |
|---|--|
| Title | Advanced Machine Learning |
| Code | ML702 |
| Loading | 4 Credit-hours |
| Prerequisites | ML701 Machine Learning or equivalent course |
| Catalog Description | This course focuses on recent advances in machine learning and on developing skills for performing research to advance the state of the art in machine learning. Students will learn kernel methods and graphical models, advanced learning algorithms, and reinforcement learning. This course builds upon concepts from Machine Learning (ML701) and assumes familiarity with fundamental concepts in machine learning, optimization, and statistics. |
| Goal | This graduate-level course aims to inculcate a deeper understanding of the advanced machine learning methods, so the students are capable of researching, developing, and implementing these methods for solving real-world problems. This course will aim to instill in students a strong grasp of the following topics: kernel methods and graphical models, advanced learning algorithms, and reinforcement learning. Additionally, a significant goal of this course is to enhance students' teamwork skills by requiring them to participate in group projects. |
| Contents | This course covers three modules: (I) Kernel Methods and Graphical Models, (II) Advanced Learning Algorithms, (III) Reinforcement Learning |
| Recommended Textbooks | <ol style="list-style-type: none"> 1. K. Murphy, <i>Machine Learning: A Probabilistic Perspective</i>, MIT Press, 2012. ISBN-10: 0262018020 2. C. Bishop, <i>Pattern Recognition and Machine Learning</i>, Berlin: Springer-Verlag, 2006. ISBN: 0387310738 |
| Recommended References & Supplemental Material | <ol style="list-style-type: none"> 1. S. Shalev-Shwartz, and S. Ben-David. <i>Understanding Machine Learning: From Theory to Algorithms</i>. | Teaching Week | Topics |
|---------------|---|
| 1 | Kernel Methods and Graphical Models Lectures Overview of Machine Learning: Course information, Motivation <ul style="list-style-type: none">• Kernel methods in machine learning• Duality and SVMs• Reproducible kernel Hilbert space Lab <ul style="list-style-type: none">• Discussion on choosing a project for module-1 of the course• Start project-1 work |
| 2 | Kernel Methods and Graphical Models Lecture <ul style="list-style-type: none">• Graphical models – representation• Bayesian networks• Markov models Lab <ul style="list-style-type: none">• Continue project-1 work |
| 3 | Kernel Methods and Graphical Models Lecture <ul style="list-style-type: none">• Graphical models – inference• Belief propagation• MAP algorithm• Sampling methods Lab <ul style="list-style-type: none">• Continue project-1 work |
| 4 | Kernel Methods and Graphical Models Lecture <ul style="list-style-type: none">• Graphical models – learning methods• Learning bayesian and markov networks• Learning bayesian network structure• Learning bayesian networks with incomplete data Lab <ul style="list-style-type: none">• Preparation of presentation on project-1 work• Continue project-1 work |

| Teaching Week | Topics |
|---------------|---|
| 5 | Kernel Methods and Graphical Models Lecture <ul style="list-style-type: none">• Exam will be held instead of 1 scheduled lecture• Student presentations Lab <ul style="list-style-type: none">• Complete project-1 work and presentation |
| 6 | Advanced Learning Algorithms This module overviews the following: Manifold Learning, Transfer Learning, Multi-task Learning, Semi-supervised Learning, and Active Learning Lecture <ul style="list-style-type: none">• Introduction to manifold learning• Local and global structure preserving methods• Dimensionality reduction• Visualization of high dimensional data Lab <ul style="list-style-type: none">• Discussion on choosing a relevant paper to implement for the project• Start project-2 work |
| 7 | Advanced Learning Algorithms Lecture <ul style="list-style-type: none">• Transferring knowledge to similar problems• Domain adaptation and sample bias correction• Multi-task learning Lab <ul style="list-style-type: none">• Continue project-2 work |
| 8 | Advanced Learning Algorithms Lecture <ul style="list-style-type: none">• Introduction to Semi-supervised Learning• Transductive settings (t-SVM, t-CNN)• Co-training paradigm• Multi-instance learning• Learning from weak and noisy labels Lab <ul style="list-style-type: none">• Continue project-2 work |

| Teaching Week | Topics |
|---------------|---|
| 9 | Advanced Learning Algorithms Lecture <ul style="list-style-type: none">• Active learning overview• Methods for sample selection• Expert opinion pooling• Concept drift Lab <ul style="list-style-type: none">• Preparation of presentation on project-2 work• Continue project-2 work |
| 10 | Advanced Learning Algorithms Lecture <ul style="list-style-type: none">• Exam will be held instead of 1 scheduled lecture• Student presentations Lab <ul style="list-style-type: none">• Complete project-2 work and presentation |
| 11 | Reinforcement Learning Lecture <ul style="list-style-type: none">• Model-free reinforcement learning• Q-learning• Deep Q-network (DQN) Lab <ul style="list-style-type: none">• Discussion on choosing a relevant paper to implement for the project• Start project-3 work |
| 12 | Reinforcement Learning Lecture <ul style="list-style-type: none">• Model-free reinforcement learning continued• Value and policy iteration• Policy gradients for continuous action spaces Lab <ul style="list-style-type: none">• Continue project-3 work |

| Teaching Week | Topics |
|---------------|---|
| 13 | Reinforcement Learning Lecture <ul style="list-style-type: none">• Duelling networks• Asynchronous actor-critic agents Lab <ul style="list-style-type: none">• Continue project-3 work |
| 14 | Reinforcement Learning Lecture <ul style="list-style-type: none">• Model-Based Reinforcement Learning• Known and learnt models Lab <ul style="list-style-type: none">• Preparation of presentation on project-3 work• Continue project-3 work |
| 15 | Reinforcement Learning Lecture <ul style="list-style-type: none">• Exam will be held instead of 1 scheduled lecture• Student presentations Lab <ul style="list-style-type: none">• Complete project-3 work and presentation |
