HC701 - Medical Imaging: Physics and Analysis

Title	Medical Imaging: Physics and Analysis
Code	HC701
Loading	4 Credit-hours
Prerequisites	Familiarity with Python programming, high-school physics
Catalog Description	This course provides a graduate-level introduction to the principles and methods of Medical Imaging, with thorough grounding in the physics of the imaging problems. This course covers the fundamentals of X-ray, CT, MRI, Ultrasound, and PET, imaging. In addition, the course provides an overview of 3D geometry of medical images and the two classic problems in analysis of medical images: segmentation and registration.
Goal	This PhD course aims to inculcate a deeper understanding of the fundamentals of Medical Imaging and its analysis. The course introduces the physics behind various imaging modalities such as x-ray, CT, MRI, Ultrasound, and PET and presents an overview of the 3D geometry relevant to medical image analysis from the perspective of solving registration and segmentation problems.
Content	Course covers: (I) Medical imaging modalities: X-ray, CT, MRI, Ultrasound, PET, (II) Medical image analysis: geometry, ITK toolkit, registration, and segmentation
Recommended Textbooks	The Essential Physics of Medical Imaging, J. Bushberg, J. Anthony Seibert, E. Leidholdt, J. M. Boone, Lippincott, Williams, & Wilkins (3rd edition).
Recommended References & Supplemental Material	1. ITK User Guide V4.13, https://itk.org/ItkSoftwareGuide.pdf 2. SimpleITK Jupyter Notebooks: http://insightsoftwareconsortium.github.io/SimpleITK-Notebooks/

Typical Week-wise Teaching Plan (3 lectures per week)

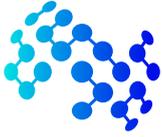

Overview of the course	
1	Introduction to Medical Imaging and Image Analysis Lecture <ul style="list-style-type: none">• Clinical motivation• What is an image?• Image geometry: origin, direction, spacing, etc• Image transformation: rigid, affine, composition• Rotation matrix, quaternion, and versor• Medical imaging file formats: DICOM, NIFTI, NRRD, etc. Lab <ul style="list-style-type: none">• Introduction to ITK-SNAP Assessment Items <ul style="list-style-type: none">• Assignment 1 handed out
2	Image Analysis Basics Lecture <ul style="list-style-type: none">• Introduction to ITK toolkit• Image quality – resolution, PSF, SNR, CNR• Loading and displaying an image• Image interpolation• Resampling and transforming an image Lab <ul style="list-style-type: none">• Transform and resample an image using ITK• Modify image metadata using ITK
3	Fundamentals of Human Anatomy Lecture <ul style="list-style-type: none">• Musculoskeletal System• Neuroanatomy• Splanchnology Lab <ul style="list-style-type: none">• Demonstration of anatomical models in class
4	Radiation Basics Lecture <ul style="list-style-type: none">• X-ray production• Radiography basics• X-ray absorption, dosage, and safety limits• Interaction of particles with matter Lab <ul style="list-style-type: none">• Calculation of X-ray absorption Assessment Items <ul style="list-style-type: none">• Assignment 1 due at the end of the week• Assignment 2 handed out

Overview of the course	
5	<p>Mammography and Fluoroscopy</p> <p>Lecture</p> <ul style="list-style-type: none">• Mammography systems• Compression, scattered radiation, and magnification• Fluoroscopic imaging chain components and modes of operation• Dosimetry, patient safety, and regulatory requirements <p>Lab</p> <ul style="list-style-type: none">• Discuss angiography and applications
6	<p>Computed Tomography (CT)</p> <p>Lecture</p> <ul style="list-style-type: none">• CT Systems designs• Modes of CT acquisition• CT reconstruction• Image quality in CT• Safety around CT scanners• CT Contrast agent <p>Lab</p> <ul style="list-style-type: none">• Hospital visit: acquiring CT scan of a CT phantom under various settings <p>Assessment Items</p> <ul style="list-style-type: none">• Assignment 2 due at the end of the week• Assignment 3 handed out
7	<p>Radiotherapy</p> <p>Lecture</p> <ul style="list-style-type: none">• Ionizing particles• Radiotherapy machines: LINAC, Proton therapy, Brachytherapy• Dose calculation and delivery techniques <p>Lab</p> <ul style="list-style-type: none">• Demonstration of radiotherapy treatment planning
8	<p>Magnetic Resonance Imaging (MRI)</p> <p>Lecture</p> <ul style="list-style-type: none">• Introduction to MRI physics• Magnetic fields, nuclear magnetic characterisation• Image weighting, decay rates, and contrasts• Safety around MRI scanners <p>Lab</p> <ul style="list-style-type: none">• Demonstration of simulations on signal decay and contrast mechanisms <p>Assessment Items</p> <ul style="list-style-type: none">• Assignment 3 due at the end of the week• Assignment 4 handed out

Overview of the course	
9	Magnetic Resonance Imaging Lecture <ul style="list-style-type: none">• MR signal, encoding, and image formation• Image acquisition: time, quality, and associated trade-offs• Basics of pulse sequences Lab <ul style="list-style-type: none">• Demonstration of MRI image simulator under various settings
10	Magnetic Resonance Imaging Lecture <ul style="list-style-type: none">• Signal from flow: perfusion and diffusion• Diffusion tensor imaging• MRI artifacts• MRI contrast agent Lab <ul style="list-style-type: none">• Hospital visit: acquiring MRI of an MRI phantom using multiple sequences
11	Nuclear Imaging Lecture <ul style="list-style-type: none">• Radiation detection and measurement• Focal plane tomography• SPECT and PET• Dual modality imaging: SPECT/CT, PET/CT, PET/MRI Lab <ul style="list-style-type: none">• Demonstration of co-registration issues in dual-modality imaging Assessment Items <ul style="list-style-type: none">• Assignment 4 due at the end of the week• Assignment 5 handed out
12	Ultrasound Lecture <ul style="list-style-type: none">• Interaction of ultrasound with matter• Ultrasound system design: transducer, detector, beam properties• 2D and 3D imaging: time, quality, artifacts• Doppler ultrasound• Acoustical power delivery and biosafety Lab <ul style="list-style-type: none">• Hospital visit: imaging abdominal organs using ultrasound

Overview of the course	
13	<p>Image Registration</p> <p>Lecture</p> <ul style="list-style-type: none">• Registration introduction: translation and rotation• Rigid and affine registration• Initializing registration: moments matching, sampling pose on spheres• Nonlinear registration models <p>Lab</p> <ul style="list-style-type: none">• Using ITK, ANTS, and Elastix for linear and nonlinear registration• Registration of Diffusion Tensor Images <p>Assessment Items</p> <ul style="list-style-type: none">• Assignment 5 due at the end of the week• Assignment 6 handed out
14	<p>Image Segmentation</p> <p>Lecture</p> <ul style="list-style-type: none">• Levelset and watersheds• Active contour• Introduction to deep learning for medical image segmentation <p>Lab</p> <ul style="list-style-type: none">• Demonstration of segmentation tools in ITK-SNAP and 3D slicer
15	<p>Review and final exam preparation</p> <p>Lecture</p> <ul style="list-style-type: none">• Lecture hours reserved for student questions <p>Assessment Items</p> <ul style="list-style-type: none">• Assignment 6 due
