CV703 - Visual Object Recognition and Detection

Title	Visual Object Recognition and Detection
Code	CV703
Loading	4 Credit-hours
Prerequisites	<ul style="list-style-type: none">• 701: Human and Computer Vision (or equivalent)• Basics of Linear Algebra, Calculus and Probability and Statistics demonstrated through relevant coursework• Proficiency in Python and Pytorch
Catalog Description	This course provides a comprehensive overview of different concepts and methods related to visual object recognition and detection. In particular, the students will learn a large family of successful and recent state-of-the-art architectures of deep neural networks to solve the tasks of visual recognition, detection and tracking.
Goal	The aim of this course is to enable students to build state-of-the-art systems for automatic image and video understanding to answer complex questions such as, what objects are present in a complex scene and where are they located? Students will be equipped with the skills for designing, implementing, training and evaluating complex neural network architectures to solve visual object recognition and detection problems.
Content	This course covers the following major modules: (I) hand-crafted features, (II) convolutional neural networks (CNNs), (III) training CNNs, (IV) object detection, (V) image segmentation, and (VI) visual object tracking.
Recommended Textbooks	<ol style="list-style-type: none">1. R. Szeliski, <i>Computer Vision: Algorithms and Applications</i>, Springer Verlag, 2011. ISBN: 18488293452. I. Goodfellow, Y. Bengio, A. C. Courville, <i>Deep Learning</i>, MIT Press, 2016. ISBN: 9780262035613
Recommended References & Supplemental Material	Relevant research papers, tech reports, and surveys for each topic, where needed, are identified in the teaching plan ahead. In addition, the following textbook will be useful: D. A. Forsyth, and J. Ponce, <i>Computer vision: A Modern Approach</i> , 2nd edition, Pearson, 2003. ISBN: 013608592X

Teaching Week	Topics
1	Course Overview and Motivation Lecture <ul style="list-style-type: none">• Introduction to visual object recognition• Overview of object recognition in biological systems• Overview of detection, localization and segmentation Lab <ul style="list-style-type: none">• Tutorial on Python• Practice problems to gain familiarity with libraries: Numpy, Pytorch, etc.
2	Introduction to Hand-Crafted Features Lecture <ul style="list-style-type: none">• Feature descriptors: Classic handcrafted methods such as SIFT, SURF, HoG Lab <ul style="list-style-type: none">• Perform empirical evaluation of hand-crafted descriptors (SIFT, SURF, HoG) for image classification, and submit a report
3	Importance of Context in Visual Recognition Lecture <ul style="list-style-type: none">• Compound descriptors and metrics• The role of context in visual recognition Lab <ul style="list-style-type: none">• Assignment # 1 due
4	Introduction to CNNs for Visual Recognition Lecture <ul style="list-style-type: none">• Convolutional neural networks: history, convolutions, pooling, normalization Lab <ul style="list-style-type: none">• Implement forward pass and backward pass for convolution and pooling layers
5	Training CNNs Lecture <ul style="list-style-type: none">• Training convolutional neural networks: data augmentation, optimizers, and regularizers Lab <ul style="list-style-type: none">• Design, train, and test a 5-layer CNN using cross entropy loss function on CIFAR-10 dataset

Teaching Week	Topics
6	Performance comparison of popular CNNs Lecture <ul style="list-style-type: none">Compare the state-of-the-art convolutional neural networks for image classification: AlexNet, VGG, GoogLeNet, ResNet and SEnet Lab <ul style="list-style-type: none">Assignment # 2 due
7	Visualizing CNNs and their learned feature spaces Lecture <ul style="list-style-type: none">Understanding and visualizing convolutional neural networks: tSNE embeddings, deconvnets and data gradients Lab <ul style="list-style-type: none">Visualize the fc-7 layer feature space of VGG-16 with the tSNE embedding tool after randomly choosing 50 instances from all categories of the CIFAR-10 dataset.
8	Introduction to Visual Object Detection Lecture <ul style="list-style-type: none">Introduction to object detectionHistory of object detection methods Lab <ul style="list-style-type: none">Prepare and submit a 2-page survey on classic object detection approaches
9	Object Detection Approaches - Prior to Deep Learning Lecture <ul style="list-style-type: none">Holistic object detection methodsDeformable part-based object detection Lab <ul style="list-style-type: none">Interface Viola-Jones face detector with a webcam
10	Deep Learning based Object Detection (Two-stage Detectors) Lecture <ul style="list-style-type: none">Deep learning for object detection (part 1): Two-stage object detection methods (from R-CNN to Faster R-CNN) Lab <ul style="list-style-type: none">Assignment # 3 due

Teaching Week	Topics
11	Deep Learning based Object Detection (Single-stage Detectors) Lecture <ul style="list-style-type: none">• Deep learning for object detection (part 2): Single-stage object detection methods (e.g., YOLO and SSD) Lab <ul style="list-style-type: none">• Apply a state-of-the-art object detector on any low light image dataset and discuss the results
12	Overview of different Segmentation Approaches Lecture <ul style="list-style-type: none">• Overview of:• Semantic segmentation• Instance segmentation• Panoptic segmentation Lab <ul style="list-style-type: none">• Run off-the-shelf codes of semantic segmentation, instance segmentation and panoptic segmentation methods on a set of images (that will be provided in the lab)
13	Introduction to Visual Object Tracking Lecture <ul style="list-style-type: none">• Introduction to visual object tracking• Object tracking based on particle filtering Lab <ul style="list-style-type: none">• Implement the integral histogram approach
14	Deep Learning based Object Tracking Lecture <ul style="list-style-type: none">• Deep learning based object tracking• Fully-convolutional siamese networks for visual object tracking Lab <ul style="list-style-type: none">• Assignment # 4 due
15	Guest Lecture & Review Lecture <ul style="list-style-type: none">• Guest lecture on a trending topic Lab <ul style="list-style-type: none">• Review and Exam Preparation
